DataScienceEcosystem

November 13, 2025

Exercise 1) Create a Jupyter Notebook

Create a new Jupyter notebook called **DataScienceEcosystem.ipynb**

Note: The next item in the course will launch JupyterLite with an empty notebook with this name that you can use to complete rest of the Exercises. You can also use any other Jupyter notebook environment (e.g. Anaconda) that you prefer to complete the assignment.

Exercise 2) Create markdown cell with title of the notebook

Create a markdown cell with the title Data Science Tools and Ecosystem using H1 style heading.

Take a screenshot of the markdown cell and name it as 2-title.png

1   Data Science Tools and Ecosystem

Exercise 3) Create a markdown cell for an introduction

Write an introductory sentence about the notebook such as the follows:

In this notebook, Data Science Tools and Ecosystem are summarized.

Take a screenshot of the markdown cell and name it as 3-intro.png

In this notebook, Data Science Tools and Ecosystem are summarized.

Exercise 4) Create a markdown cell to list data science languages

Start the cell with an overview line such as:

Some of the popular languages that Data Scientists use are: Then create an ordered list (i.e. numbered) listing 3 (or more) commonly used languages for data science.

Take a screenshot of the markdown cell and name it as 4-dslanguages.png

Some of the popular languages that Data Scientists use are:

1. Python
2. R
3. SQL
4. Julia
5. Scala
6. Java

Exercise 5) Create a markdown cell to list data science libraries

Add an overview line to the cell like:

Some of the commonly used libraries used by Data Scientists include: Below this line add an ordered list listing 3 (or more) commonly used libraries in data science.

Take a screenshot of the markdown cell and name it as 5-dslibraries.png

Some of the commonly used libraries used by Data Scientists include:

1. Pandas
2. NumPy
3. Scikit-learn
4. Matplotlib
5. Seaborn

Exercise 6) Create a markdown cell with a table of Data Science tools

Create a single column table in this cell with the first row containing the header Data Science Tools. The subsequent three rows in the table should indicate three development environment open source tools used in data science.

Take a screenshot of the markdown cell and name it as 6-dstools.png

*Hint: Refer to **Lab: Using Markdowns in Jupyter Notebooks** to create a table.*

Data Science Tools
Jupyter Notbooks
JupyterLab
RStudio

Exercise 7) Create a markdown cell introducing arithmetic expression examples

Add a line in this cell with H3 style heading with text like:

Below are a few examples of evaluating arithmetic expressions in Python.

Take a screenshot of the markdown cell and name it as 7-introarithmetic.png

1.0.1 Below are a few examples of evaluating arithmetic expressions in Python

Exercise 8) Create a code cell to multiply and add numbers

In this code cell evaluate the expression (3*4)+5. Insert a comment line before the expression to explain the operation e.g. This a simple arithmetic expression to mutiply then add integers. Then execute the cell to ensure the expression returns the expected output of 17.

Take a screenshot of the code cell with output and name it as 8-multiplyandaddintegers.png

```
[1]: #This a simple arithmetic expression to mutiply then add integers.

     (3*4)+5
```

`[1]: 17`

Exercise 9) Create a code cell to convert minutes to hours

In this code cell write an expression that converts 200 minutes into hours. Insert a comment line before the expression to explain the operation e.g. This will convert 200 minutes to hours by diving by 60.

Run the cell to evaluate the expression.

Take a screenshot of the code cell with output and name it as 9-hourstominutes.png

`[2]:`
```python
#This will convert 200 minutes to hours by dividing by 60.

200/60
```

`[2]: 3.3333333333333335`

Exercise 10) Insert a markdown cell to list Objectives

Below the introduction cell created in Exercise 3, insert a new markdown cell to list the objectives that this notebook covered (i.e. some of the key takeaways from the course). In this new cell start with an introductory line titled: Objectives: in bold font. Then using an unordered list (bullets) indicate 3 to 5 items covered in this notebook, such as List popular languages for Data Science.

Take a screenshot of the markdown cell and name it as 10-objectives.png

Objectives:

- Some of the popular languages that Data Scientists.
- Some of the commonly used libraries used by Data Scientists.
- Some of the commonly used 0pen source tools in data science for development environment.
- evaluation of arithmetic expressions in Python.

Exercise 11) Create a markdown cell to indicate the Author's name

In this markdown cell markdown cell include the following text Author in H2 style heading. Include your name as regular text below the word Author.

Take a screenshot of the markdown cell and name it as 11-authordetails.png

Note: Save and download the notebook.

1.1 Author:

Jomi Jose

Exercise 12) Share your notebook through GitHub

Upload your notebook to a public resository on GitHub.

Note : Please keep the GitHub repo link of the notebook handy. You will need to submit this link as a part of the assignment evaluation.

Hint: Refer to Lab: Working with files in Jupyter Notebooks to download the notebook from SN Labs.

Exercise 13) Take a screenshot of the first page of the notebook and save it as 1-notebook.png

*Refer to **Hands-on Lab: Getting Started with GitHub** to upload the downloaded notebook to **GitHub**.*
